PROJECTS

Formulation and Evaluation of Buclizine HCl I R Tablets

Buclizine HCl is an anti emetic drug. The main aim of the project is to develop generic version of buclina tablets which are of Brazil market. All the processing parameters went well but problems arised during stability studies of the product in which the disintegration time of the product is increased where the endpoint is obtained in between 10-15 min which eventually lead to dissimilarity between generic and marketed product dissolution profiles. This unforeseen problem is solved by addition of superdisintergrant to the formulation after which the generic product has showed better performance than the marketed product.

ACHIEVEMENTS & AWARDS

GPAT RANKER-2019.

Presented a poster at IPC Chennai-2019 named Design, Development and Evaluation of Bilayer Tablets of Domperidone maleate.

Participated in a webinar on WRITING A THESIS by MYBO-2020.
